Projects

Swerl - Financial Web App

A web application that allows users to sign up and keep track of their expenses by utilizing an array of tools including expense input and editing (CRUD functionality), customizable budget goals, and visualization with dynamic charts.

- Enables the user to take control of their finances and to see how they can adjust their spending based on the budgeting goals they set.

Technologies / Libraries: Python, Django, HTML, CSS, Javascript, Pandas, Plotly, SQLite

WeatherMusic - Weather Data Web App

A web application that takes a user's location and accesses APIs to determine the user's local weather conditions, displays the weather conditions and plays themed music.

- Provides the user with an enjoyable way of checking their local weather conditions by incorporating weather themed music based on those conditions.

Technologies / Libraries: Python, Flask, Jinja2, HTML, CSS, Javascript (& AJAX), SQLAlchemy, Regular Expressions Library, Google Geocoding API, YouTube API, National Weather Service API, HTML5 Geolocation API

Sorting Algorithm Visualizer GUI

A GUI built with Tkinter that allows the user to generate a random array, with control over size and magnitude, and then perform 1 of 4 sorting algorithms with accompanying visuals.

- Used to help the user to further their understanding of these 4 popular sorting algorithms through a fun and visually appealing way.

Technologies / Libraries: Python, Tkinter, Ttk (styling), Algorithms: Bubble, Merge, Quick & Heap Sort

---

Education

Self Taught / Full Stack Engineer

February 2020 - Present   Columbus, Ohio

I utilized a variety of sources to aid in my development. CS50 allowed me to develop a deeper understanding of computer science fundamentals and introduced me to several languages including C, Python, HTML, CSS, and JavaScript. Pairing that with CodeCademy and Hyperskill made me proficient in Python, HTML, CSS, and JavaScript. Supplemental sources (books, DS+A courses, etc.) provided additional context to my understanding of concepts like object oriented programming, data structure and algorithms. Together, I have used these resources to become a capable full stack engineer.

Relevant Coursework / Resources:

- Harvard's CS50 (Intro to Computer Science), Google's Intro to Data Structures & Algorithms, CodeCademy's Python, JavaScript & React courses, *Automate the Boring Stuff with Python* by Al Sweigart, *Algorithms Fourth Edition* by Robert Sedgewick and Kevin Wayne, JetBrains Academy (Hyperskill), StackOverflow, GitHub, and, of course, YouTube.

The Ohio State University / B.S. in Atmospheric Science

August 2016 - April 2019   Columbus, Ohio

I took a wide variety of math and science courses, ultimately learning to apply quantitative problem-solving methods to complex situations. I have found the skills I built earning my B.S. to be beneficial in both learning technologies and building projects.

Relevant Coursework:
- Statistical Analysis 1, Fundamental GIS, Calculus 1, 2 & 3, Differential Equations and Their Applications, Physics 1 & 2, Microclimatological Measurements

Work

Associate at ALDI

May 2017 - Present   2395 Silver Dr, Columbus, OH

- I am an integral part of the customer's positive experience with my communication skills, adaptability, and team-oriented philosophy.
- I work for the most profitable ALDI in the division and as such know how to work under pressure while prioritizing the customer's satisfaction.

Skills & Interests

Skills: Python, Django, Flask, JavaScript, React, SQL, HTML5, CSS3, Git, Tkinter, Bootstrap

Interests: Coding, Meteorology, Hiking, Biking, Travel, Games
